

Thousands of companies trust us with their data—with good reason.

Custom Password Policy Password requirements and policies that match your own*	✓	Application Restoration Restore your applications and data to any point within the last six months*
Encryption Industry standard SSL data transmission, plus encrypted storage	✓	LDAP Integration Use your existing authentication/authorization infrastructure*
IP Filtering You decide which IP addresses can access your applications*	✓	Annual Third-Party Security Assessment Outside auditors report to our executive team
Account Security Only authenticated, registered users allowed access	✓	Automated Backup Procedures Daily backups of all QuickBase information
Application Security Only invited users can access databases	✓	High Availability A physically separate, mirrored data center stores all user information
Role-Based Permissions Limits access to specific information down to the field level	✓	SAS 70 Type 2 Audit Report to ensure conformance with data safety/control standards

“Simply stated, [QuickBase] epitomizes all aspects of Best Practices.”

— *Confidently Secure: Online Application Security, Stratecast/Frost & Sullivan, Feb. 2009*

Stability. Since the late 1990s, Intuit has built its business around making Web-based databases safe and robust. Today, millions of customers trust Intuit with their data, and their most important enterprise-level information.

Control. All of that knowledge and infrastructure goes into QuickBase’s security capabilities, to provide you with unmatched control, protection, and flexibility to implement your centralized enterprise IT policies.

Intuit QuickBase

Business Agility and Team Productivity for your Enterprise

Five reasons why you can trust QuickBase to provide world-class security.

Proven Procedures.

As a member of the Intuit product family, we take the privacy and security of your data very seriously. Intuit's corporate information security team is responsible for creation, maintenance, review and enforcement of information security policies that protect against unauthorized access to or use of your information through administrative, technical, and physical safeguards. Security and privacy audits are performed on an annual basis to help ensure compliance with the high standards we hold ourselves to.

Integration With Your Policies.*

QuickBase Enterprise Edition comes with a range of features for centralized security administration. IP Address filtering enforces data security policies by restricting access to authorized computers. LDAP integration means you can apply your existing authentication and authorization infrastructure to share user profiles across existing IT systems and QuickBase accounts.

Robust Encryption.

Your data is encrypted when stored on disk, ensuring privacy, and we make encrypted offsite backups on a daily basis. In addition, QuickBase employs industry-standard SSL certificates from an established third-party certificate authority, to prevent your data from being intercepted during transmission.

Granular Permissions.

QuickBase databases and applications can only be accessed by people who have been explicitly chosen and authorized—this provides complete control over who can view, modify, and edit data. In addition, field-level permissions restrict access to specific information within the database; this makes it easy to give customers or suppliers “just enough access.”

It's Our Business. QuickBase is part of Intuit, a \$3 billion company with over 25 million customers, founded in 1983. Web-based data management is at the core of many of our biggest products, like TurboTax for the Web®, QuickBooks Online Edition®, and Mint.com®. We're good at security because we have to be.

* These features may only be available with the QuickBase Enterprise edition. Not all features are available with all QuickBase plans.

More than half the Fortune 100 use QuickBase to make their teams more productive.

PMO eliminated 18-24 days of meetings per person per year.

2,000 fewer hours spent managing SOX compliance process.

Saved \$7.5 million in development cost.
